Balance

The power of vestibular rehabilitation with VR

BalanceVR offers immersive VR experiences that simulate real-life environments including head movements for vestibular stimulations. With training modules promoting adaptation, substitution and habituation, you can tailor the balance training program according to your patient's needs.

An interactive adventure

BalanceVR's engaging software motivates and monitors patient progression, transforming balance training into an interactive and motivating adventure.

Targeted assessment and training

BalanceVR is specifically designed for assessing and training balance, including vestibular disorders. Essential vestibular assessment modules include Cervical Range of Motion and Subjective Visual Vertical to objectively assess patient function and monitor progress during therapy sessions. Progressive training modules, such as optokinetics, target tracking, and crowdVR, provide efficient and motivating training. You can also add PhysioVR for a broader range of neurologic and orthopedic rehabilitation options.

Get started quickly

You can use BalanceVR without a force plate and upgrade down the road with a static or dynamic force plate should the need arise. This allows you to get started quickly and expand your clinic's assessment capabilities when needed.

What do you get?

Tailor your balance rehabilitation solutions to your patients' needs

BalanceVR

PhysioVR

The power of rehabilitation with virtual reality

- Fully immersive, no visual reference in peripheral view.
- Simulated real-life training modules promoting adaptation, substitution and habituation.

Module examples:
SVV, Target Tracking,
Optokinetics, Supermarket

StaticVR

BalanceVR Smart

PhysioVR Smart

...Or with a StaticVR force plate

- Static posturography force plates for basic functional balance assessment.
- Force plates with objective data on balance control for tailored balance training.

Module examples:
CTSIB, LOS, LOS Rehab,
BirdVR

MotionVR (+) (OH)

BalanceVR Premium (+) (OH)

PhysioVR Premium (+) (OH)

...Combined with a MotionVR dynamic force plate

- CDP (Computerized Dynamic Posturography) for full functional balance assessment.
- Dynamic 360 degree force plate to simulate real-life surface and stimulate the full balance system.

Module examples:
SOT, ADT, MCT, LOS,
Motion Program, SkiVR

SOT: Sensory Organization Test, ADT: Adaptation Test, MCT: Motor Control Test, LOS: Limits of Stability, CTSIB: Clinical Test for Sensory Interaction on Balance, SVV: Subjective Visual Vertical.

Science made smarter

Interacoustics is more than state-of-the-art solutions

Our mission is clear. We want to lead the way in audiology and balance by translating complexity into clarity:

- Challenges made into clear solutions
- Knowledge made practical
- Invisible medical conditions made tangible and treatable

Our advanced technology and sophisticated solutions ease the lives of healthcare professionals.

We will continue to set the standard for an entire industry. Not for the sake of science. But for the sake of enabling professionals to provide excellent treatment for their millions of patients across the globe.
