# EyeSeeCam

## Video Head Impulse Test (vHIT) made easy

The EyeSeeCam vHIT provides quick and objective measurements of the vestibular ocular reflex (VOR). The new version of EyeSeeCam offers outstanding new features:

- Guides and 3D head models to help generate accurate head impulses
- Extremely lightweight, superior goggle design with camera stabilizers to reduce slippage
- Saccade editor and numerical data. Display and edit overt and covert saccade numerical data
- Built in SHIMP protocol (Suppression Head Impulse Test)
- Suggested threshold table. An upper and lower suggested limit can be manually entered
